## Air Technology

The essence of each creation lies in Mistral®, a three-dimensional padding with a unique architecture. With its name remembering the wind blowing in the Mediterranean, this padding recalls the air, the sea, the strength, the sky made clear by the wind.

The two mesh surfaces, supported by thousands of vertical threats, allow air to pass through every part of the padding generating freshness, cleanliness and wellness.

Resting on the air, having just a very small part of the surface in contact with the body, this is the secret of this extraordinary padding.

Its special structure moreover allows an extremely accurate distribution of body weight, so much that any part of it is supported by these threats which act like a lot of big springs. The body receives support in all its parts having a correct posture at resting position and therefore a sense of widespread wellbeing.

## What is Mistral®?

### 1) It is the new three-dimensional padding!

Mistral® is the new three-dimensional padding which is transforming the conception of the mattress. It is a revolutionary product unique in the world.

### 2) 100% Polyester

Mistral® is entirely made of polyester yarn, completely recyclable and hypoallergenic. It is a safe product for human health, OekoTex certified. The polyester makes the Mistral® water-repellent and durable.

### 3) Honeycomb structure

Thanks to its three-dimensional nature, The Mistral® is made up of an upper and a lower honeycomb surface. These surfaces are resistant, light and elastic. They make Mistral® a versatile and useful product for different uses.

### 4) Thousand threads composition

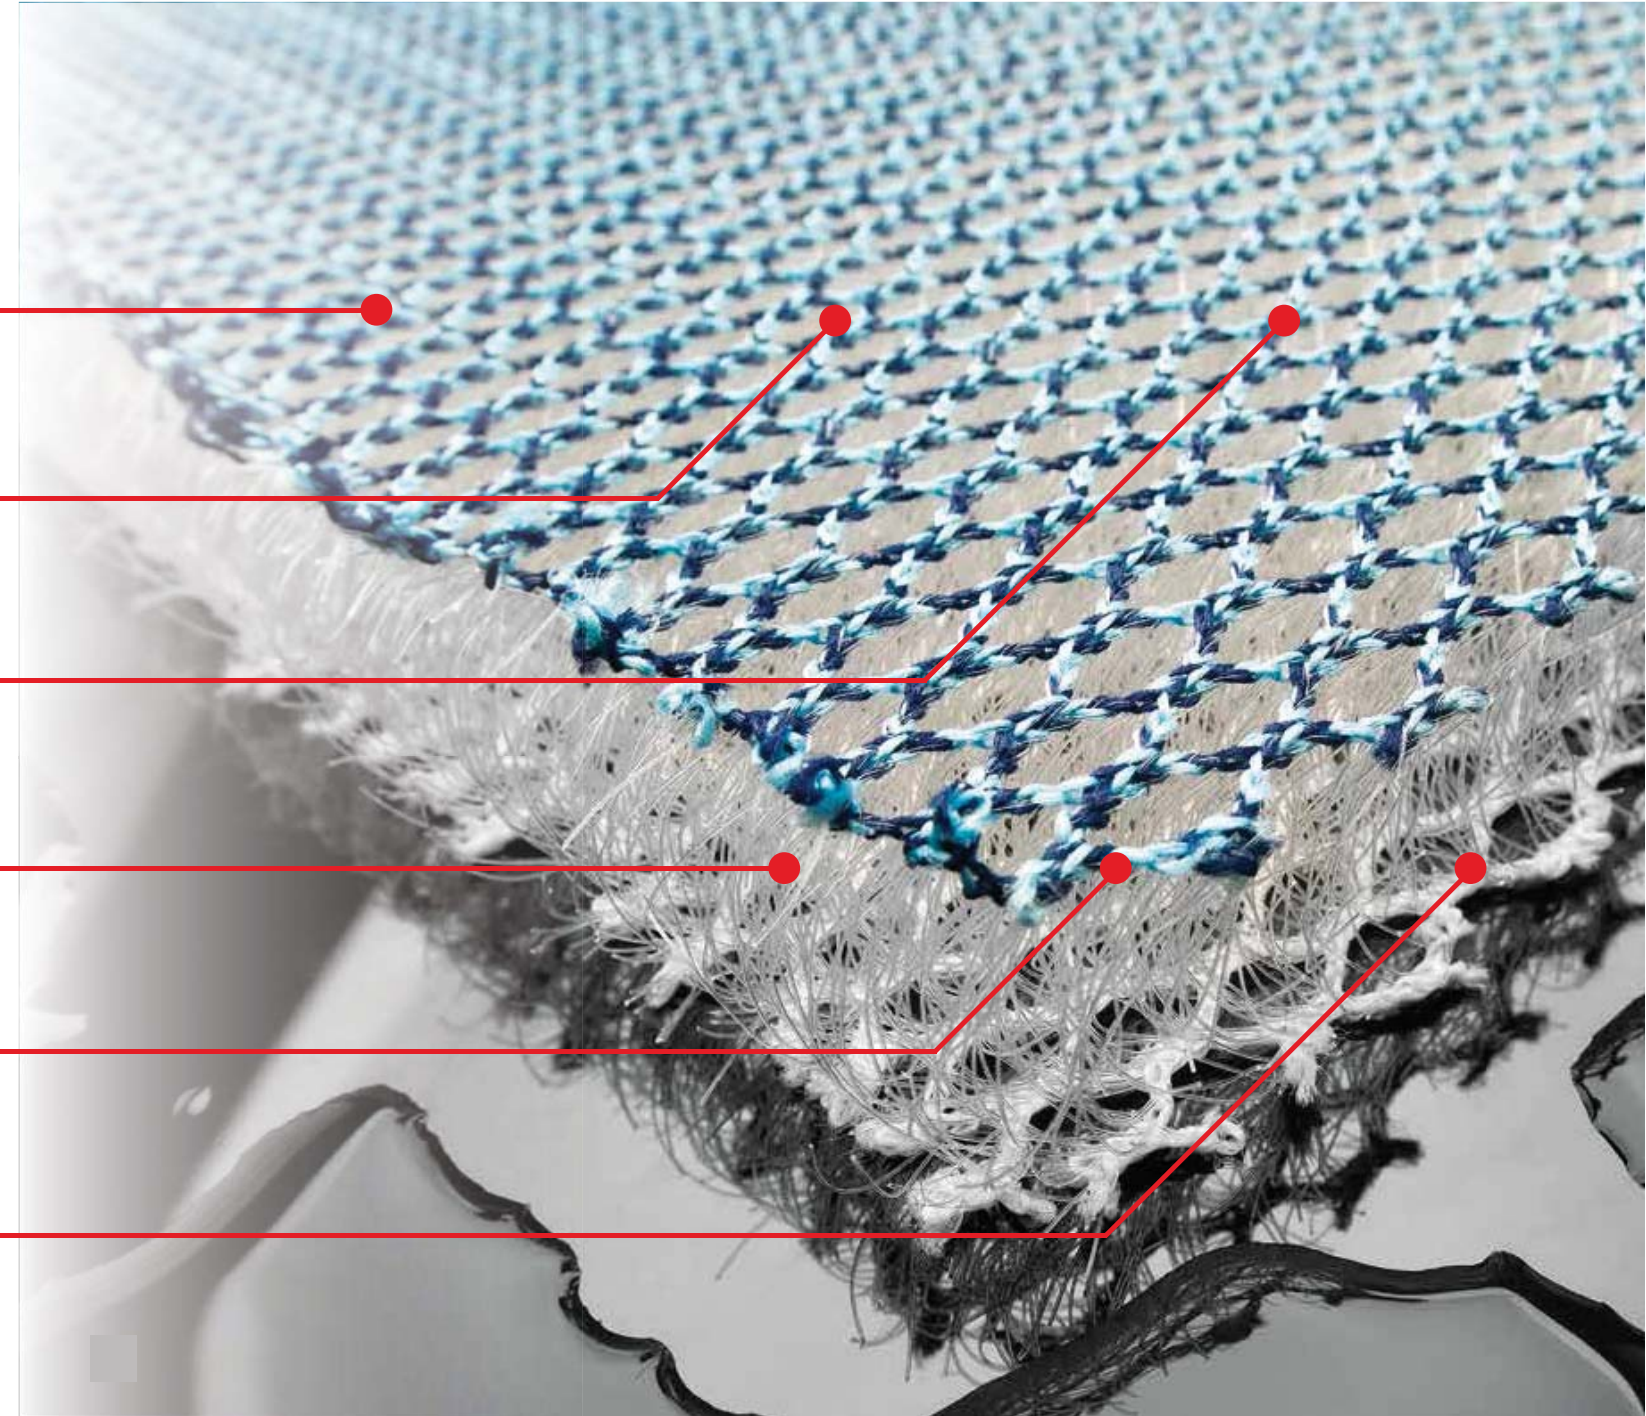

The Mistral® is made, in its central part, of innumerable vertical threads. They have been positioned in a specific way and in a precise number for each centimetre of the surface. Mistral® is the result of years of research whose result has generated both a technological and comfortable product.

### 5) 90% empty

The Mistral® surface is 90% empty and then it is crossed by air. Remaining 10% is composed of the innovative honeycomb structure and the countless threads which create thickness, lift and comfort.

### 6) Three-dimensional fabric

The Mistral® presents a three-dimensional weaving thanks to a particular loom which braids the yarn working on the three dimensions of the space.

# What can the Mistral® do?

## 1) It guarantees a perfect ventilation

The Mistral® is a fabric that does not exist for 90%: it is empty! Thanks to its particular structure, the Mistral® creates an air cushion between the body and the mattress, regulating body temperature.

## 2) It guarantees freshness

Thanks to the constant flow of fresh air entering the mattress through the side holes and those present in the lower part, the Mistral® will always be sprayed with fresh and clean air, ensuring a unique hygiene for the whole mattress.

## 3) It gives support without pressure

The Mistral® is made up of thousands of threads aiming at dividing and distributing the weight of a person in so many tiny forces.

In practice, you will sleep and rest on a real air cushion. Thanks to this particular feature the Mistral® supports your body without the slightest pressure, improving the general comfort of the mattress and therefore the quality of your sleep.

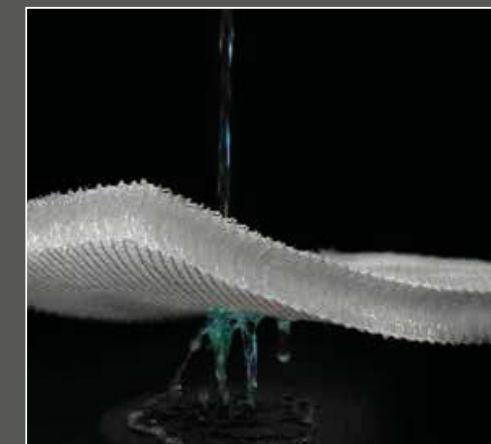

## 4) It fits your body

The Mistral® perfectly fits the human body, following forms and movements. The Mistral®, in fact, is very elastic and thanks to the study done on loads, it manages to "understand" when to yield, fitting perfectly the most angular body parts such as elbows, shoulders and knees, offering the maximum comfort.

## 5) It does not gather moisture

Mistral®, being made of polyester and 90% empty, does not absorb or retain water or other liquids. Mistral® is innovative also for this reason. It is the only padding in the world that does not retain moisture, remaining always dry and fresh.

## 6) It keeps your mattress clean.

Thanks to its innovative design, with Mistral® you can keep your mattress clean. Its particular structure gives the possibility to keep the mattress always clean and fresh, preventing the formation of mites, mold and bacteria. By periodically vacuuming the surface of the Mistral®, you will get the best hygiene condition in your mattress. It's easy! Isn't it?

# ELEGANCE

## Maiori Cover

Upper and lower panels are made of a three-dimensional fabric with high breathability and resilience. Checked quilting with patterned design and perimeter borders. Dry polyester, anti-bedsores and hypoallergenic padding. Lacy, high breathable internal containment fabric. Perimeter band made in its upper and lower part of grey high breathable three-dimensional fabric. White eco-friendly latex central part with rectangular quilting and design. White eco-friendly latex handles in the middle of the band with the logo embroidered with Lurex yarn. Grey ribbon on the upper and lower panels borders. Perimeter zip hidden in the upper border. Completely removable and separable cover. Our covers are all available in the topper thicknesses.

# GLAMOUR

## Leonardo Cover

The Leonardo Cover is composed of an upper panel in three-dimensional fabric, highly breathable and hypoallergenic. The design of the upper panel is designed to enhance the comfort of the mattress, combined with a touch of design. The padding is in dry and hypoallergenic polyester, but the panel is also available in light linen. The perimeter band is made of 3D fabric, Mercedes in light beige and Liverpool in brown colour, highly breathable, combined with high quality and durable Orange fabric. Handles are made of Mercedes fabric and mounted in the middle of the band, with a Orange embroidered logo to create a contrast. Brown upper and lower perimeter ribbon. Perimeter zip hidden in the upper border, with real leather slider and hot impressed logo. Completely removable and separable cover. All our covers are made in all sizes and heights. The padding is in light linen and this personalization is possible for the entire Exclusive line

## Giotto Cover

The Giotto Cover is composed of an upper panel in Coimbra fabric. The design of the upper panel is designed to enhance the comfort of the mattress, combined with a touch of design. The padding is in dry and hypoallergenic polyester, but the panel is also available in light linen. The perimeter band, instead, is made of 3D fabric, Mercedes in light beige, highly breathable, combined with high quality and durable white fabric. Handles are made of white fabric and mounted in the middle of the band, with a beige embroidered logo to create a contrast. White upper and lower perimeter ribbon. Perimeter zip hidden in the upper border, with real leather slider and hot impressed logo. Completely removable and separable cover. All our covers are made in all sizes and heights. The padding is in light linen and this personalization is possible for the entire Exclusive line

# PREMIER

## Atlantic Cover

Three-dimensional fabric with high breathability, rectangular design and quilting, with perimeter borders. Dry polyester, antimicrobial and hypoallergenic padding. Lacy, high breathable internal containment fabric. Symmetrical light-blue side band, with a high breathable three-dimensional fabric. White colour insert in the middle of the band with handle. Upper and lower panels with light-blue borders. Perimeter zip under the upper border. Completely removable and separable cover. Covers available in different thicknesses.

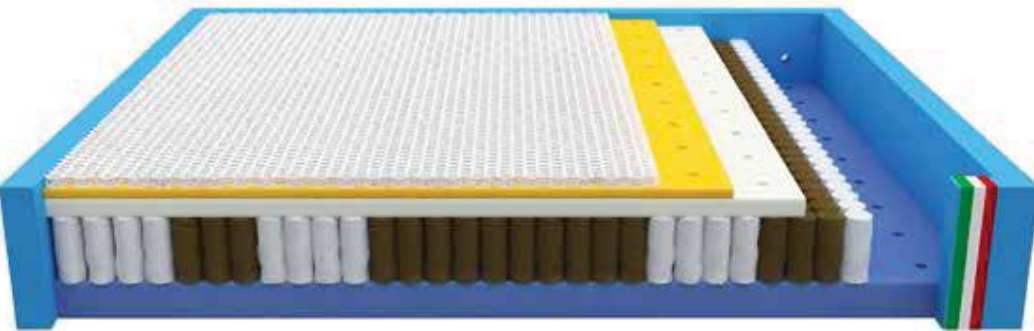

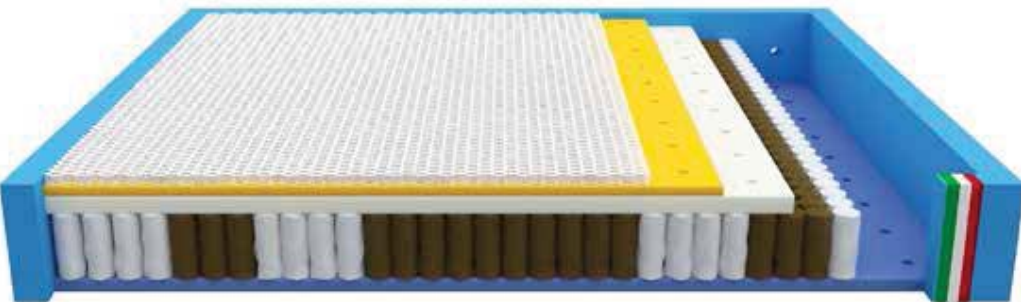

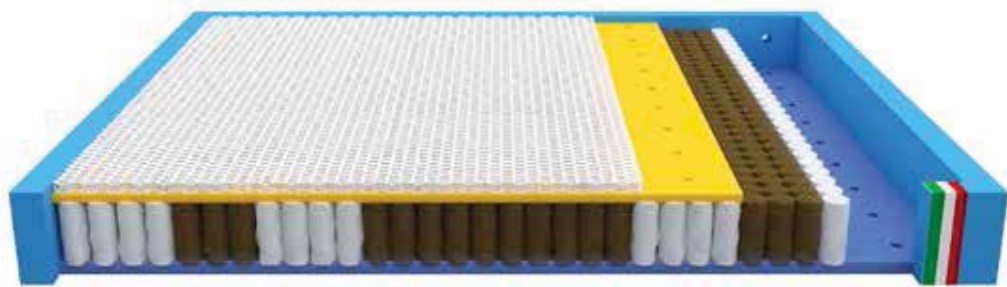

## Pacific Cover

Three-dimensional fabric with high breathability, checked design and quilting, with perimeter borders. Dry polyester, antimicrobial and hypoallergenic padding. Lacy, high breathable internal containment fabric. Symmetrical white side band, with a high breathable three-dimensional fabric. Dark brown colour with an insert in the middle of the band, with handle. Upper and lower panels with dark brown borders. Perimeter zip under the upper border. Completely removable and separable cover. Covers available in different thicknesses.

# DELUXE

Designed for those who do not want to lose the classic mattress but want to have the benefits of a modern mattress. The body rests in contact with the Mistral®, an high breathable ergonomic layer. Inside the BoxMistral® there are 400 pocket springs for the single bed and 800 for the double. They are independent and have two different thicknesses, 1.8mm and 2mm. The particular distribution of the different types of

springs, allows to have a diversified response to compression for 7 areas of the body. Each spring is contained in an anti-wear bag. The spring is placed on a base of high strength drilled Cell Foam and sealed by an Elastic Foam strap. The perimeter of the BoxMistral® is foamed with Voractiv® low-emission polyurethane. It is under international patent protection - CE Conformity Marking - Certified by LGA and CATAS.

# SUPREME

The BoxMistral® Micro Spring is composed, in its upper part, of a three-dimensional layer, the Mistral® Soft. In addition to the characteristics of Mistral® the BoxMistral® Micro Spring is made up of high-density pocket micro springs (645 micro springs for the single bed and 1376 micro springs for the double) with independent movement and separate hardness and lift, designed to support the different parts of the body. It was created for those who prefer sleeping on a medium stiffness mattress without losing the beneficial effect of

a balanced weight support during sleep. It allows to increase in a clear way, the characteristics of support and lift of the mattress and gives great comfort during sleep. The perimeter of the BoxMistral® Micro Spring is foamed with Voractiv® low-emission polyurethane. It is under international patent protection - CE Conformity Marking - Certified by LGA and CATAS.

# ROYAL

For those who prefer the soft relaxing effect of the mattress, the BoxMistral® SuperMicroSpring is the ideal solution. The upper part consists of Mistral® Soft. The inside of the mattress consists of 1360 super Micro springs (single bed) and 2924 super Micro springs (double bed); each spring is independent. Each of them, contained in a bag of wear-resistant material, allows a differentiated compression according to the weight exerted. With a diameter of only 22mm and 1mm thick, alternated in groups, they are spread over 7 areas

of the body thus favouring a perfect weight support. The robustness of the BoxMistral® is also ensured by its base, the polyurethane and, above all, by the perimeter border foamed with Voractiv Polyurethane. It is under international patent protection - CE Conformity Marking - Certified by LGA and CATAS.

# PILLOWS

# MELODY

The Melody pillows line is composed of the Mistral® cover which, thanks to its honeycomb structure, favours a continuous ventilation, guaranteeing sleep hygiene. The Mistral® Layer follows the movements of the head and the cervical and, thanks to its thousands threads composition, it distributes the pressure on the contact areas. Moreover, thanks to its characteristics, the Layer Mistral® creates a layer of air between the head, the cervical and the inside of the pillow. The interior is made of a highly ergonomic Memory Foam soap. The upper part of the soap is made of a coloured Elastic Foam insert in various fragrances, also favouring a better comfort than a normal Memory Foam pillow.

# WAVE

The Orthocervical Mistral® pillow is a high-tech orthopaedic product. The double wave shaping accentuates the cervical support, supporting the vertebrae in an even more correct posture preventing and reducing cervical pains. The ventilation favoured by Mistral® thanks to its technological three-dimensional structure, guarantees maximum hygiene and excellent comfort. The alveolar surface, anchored to hundreds of vertical threads, stimulates microcirculation, through a continuous micro massage.
